

## INTISARI

Penelitian ini bertujuan untuk menguji secara empiris pengaruh *current ratio*, *debt to equity ratio*, *return on assets*, dan *earning per share* baik secara simultan maupun parsial terhadap harga saham dan variabel mana yang memberikan pengaruh dominan terhadap harga saham pada perusahaan *food and beverages* yang terdaftar di Bursa Efek Indonesia.

Pengambilan sampel menggunakan metode *purposive sampling*, berdasarkan kriteria yang telah ditentukan didapat 12 sampel perusahaan *food and beverages* yang terdaftar di Bursa Efek Indonesia tahun 2013-2015. Penelitian ini menggunakan analisis regresi linier berganda dengan alat bantu yang digunakan adalah program SPSS versi 21.0.

Hasil penelitian simultan (uji F) menunjukkan bahwa model regresi layak digunakan untuk memprediksi *current ratio*, *debt to equity ratio*, *return on assets*, dan *earning per share* terhadap harga saham pada perusahaan *food and beverages*. Secara parsial (uji t) dihasilkan bahwa variabel *current ratio*, *return on assets*, dan *earning per share* berpengaruh positif dan signifikan terhadap harga saham, sedangkan variabel *debt to equity ratio* berpengaruh tidak signifikan terhadap harga saham. *Return On Assets* memiliki pengaruh dominan terhadap harga saham.

Kata kunci : *Current Ratio*, *Debt to Equity Ratio*, *Return On Assets*, *Earning Per Share*, Harga Saham.

## ABSTRACT

This research is meant to test empirically the influence of current ratio, debt to equity ratio, return on assets, and earning per share both partially and simultaneously to the share price and to find out which variable give dominant influence to the share price of food and beverages companies which are listed in Indonesia Stock Exchange.

The sample collection technique has been carried out by using purposive sampling method, based on the predetermined criteria 12 food and beverages sample companies which are listed in Indonesia Stock Exchange in 2013-2015 have been selected as samples. This research has been conducted by using multiple linear regressions and SPSS program 21<sup>st</sup> version.

The result of simultaneous test (F test) shows that the regression models are feasible to be used to predict current ratio, debt to equity ratio, return on assets, and earning per share to the share price of food and beverages companies. The result of partial test (t test) shows that current ratio, return on assets, and earning per share give positive and significant influence to the share price whereas debt to equity ratio does not give significant influence to the share price. Return on Assets is the variable which gives dominant influence to the share price

**Keywords:** Current ratio, debt to equity ratio, return on assets, earning per share, share price.
